

Integrating TSTM Into Your Existing Curriculum Tool

Step 1: Scan toolkit topic areas to identify a lesson with connections to your current curriculum and/or learners' needs. Then analyze that lesson.

Toolkit Topic Area:	Selected TSTM Lesson(s) (can do with 1 or more lessons)	Matches learners' needs?			Connects with curriculum?			Fills a gap in curriculum?		
		Yes	Possibly	No	Yes	Possibly	No	Content	Skills	Approach

Step 2: Focus on the lesson(s) in the "Yes" and "Possibly" columns or that fill a gap you want to address. Then consider: where does this lesson match your existing curriculum (i.e. alignment with existing lesson plans and material(s))?

"Yes", "Possibly" or Gap Filler Lesson(s)	Where does this align with my existing curriculum?

Step 3: Consider what adaptations would be needed to integrate the lesson content into your current curriculum. Then make any necessary adaptations in preparation for integrating the lesson(s) or project into your practice.

TSTM Lesson(s) from Step 2	Level of lesson adaptation needed?		
	None	Minimal (what needs to change?)	Substantial (what needs to change?)
